DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary.

 Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Talley, Jr. et al (U.S. Patent 6,767,498 B1), Wagner et al (U.S. Patent 6,838,043 B1) or Dugan

Art Unit: 1732

et al (U.S. Patent Application Publication 2003/0062658 A1), in combination with Kato (U.S. Patent 4,908,176 A) for the reasons of record.

Response to Arguments

- 4. Applicant's arguments filed on 14 December 2006 have been fully considered but they are not persuasive.
- 5. The compressing in Kato does render obvious the limitation of "compressing the first fabric to a density of at least 10% of a density of the first polymer" because Kato teaches compressing the first fabric to control the apparent density to 0.15 to 0.5 g/cm³ (e.g., to ensure bonding of the yarns, fibers or filaments which form the fabric) at a desired temperature (note Example 1; the temperature depends on, for example, the polymer materials used, and the temperature will be lower than the temperature at which the fibers melt).
- 6. Talley, Jr. et al, Wagner et al and Dugan et al all teach applying a mechanical force to cause at least partial splitting as claimed, and Kato is also directed to a fabric containing split fibers. Furthermore, the term "subsequently" in the last paragraph of instant claim 1 does not mean that the application of mechanical force necessarily occurs after the compressing step (note that the open language of the claims (i.e., "comprising") and the instant specification do not limit the

Art Unit: 1732

instant process to the sequential steps recited in instant claim 1).

Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leo B. Tentoni whose telephone number is (571) 272-1209. The examiner can normally be reached on Monday - Friday (6:30 A.M. - 3:00 P.M.).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina A. Johnson
